

Hand Punch 4000

Overview

Biometrics are playing a much larger role in timekeeping and access control, as it becomes more important to positively identify worker access to a facility or PC. Timecentre's Hand Punch clocks accurately identifies each employee by the unique size and shape of his or hand, increasing the security and accuracy of your company's time and eliminating 'buddy punching'.

Time cards and employee badges are optional. To clock in on the biometric time clock, the employee's hand becomes their time card. To setup a Hand Punch, assign an ID number to each employee. enroll employees by recording their assigned ID number. An algorithm is recorded based on three placements of the employees hand. Every punch is then verified with this record, ensuring the identity of the employee clock in.

Highlight

The HandPunch is extremely durable. It has been used at constructions sites, manufacturing plants, and other similar environments where its been forced to brave the elements. It proves its sturdiness and reliability and you never have to worry about lost cards!

"Aside from the occasional need to wipe fingerprints from the biometric hand platform, the clocks are essentially maintenance-free. We tested the biometric units for nearly a year before going 100% live and we were never able to sneak in a punch with a hand that didn't math the preceding ID #s"
